

Bitrix Environment for Linux (RPM)

Installation Instructions

Install sequence:

```
# wget https://repo.bitrix.info/yum/bitrix-env.sh
# chmod +x bitrix-env.sh
# ./bitrix-env.sh
```

Before or after installation, the Bitrix product must be allowed access to the following TCP ports in order to function properly:

80	http
443	https
5222	bitrix xmpp server
5223	bitrix xmpp ssl server
25	bitrix smtp server
8890	ntlm authentication
8891	ntlm authentication via ssl
8893	pull server (http)
8894	pull server (https)

Likewise, if you intend to use Bitrix SMTP, you will need to turn off sendmail or other SMTP services installed by default.

```
# service sendmail stop
# chkconfig sendmail off
```
